Gradient Frosted Curved Frosted Decorative Glass Block ORNVITRUM-CFFGB

ORNVITRUM CFCGFGB Gradient Curved Frosted Decorative Glass Block combines curved styling, textured glass and blended colours for contemporary interiors. Its frosted surface helps soften visibility while allowing light to pass through. Moreover, custom gradient colours offer flexibility for different design concepts. This decorative glass block is suitable for partitions, feature walls, reception areas, hotels, retail spaces and commercial interiors. Each block measures 150 × 150 mm, has a thickness of 20 mm and weighs approximately 1.2 kg. Compatible 201 stainless steel fixing accessories are available for suitable installation systems.

Installation Detail

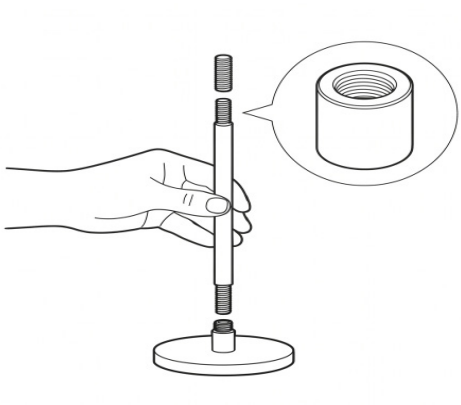

Install ORNVITRUM CFCGFGB using a suitable, engineered fixing system. First, fit protective silicone sleeves into the designated glass apertures to reduce direct contact with metal parts. Next, position the compatible rods and 201 stainless steel connectors, aligning each block carefully. Finally, secure the assembly to suitable floor and ceiling supports. Confirm fixing dimensions, structural loads, and installation details before work begins.

Surface Preparation and Marking

Mark and verify the precise layout coordinates on the mounting floor and ceiling surfaces.

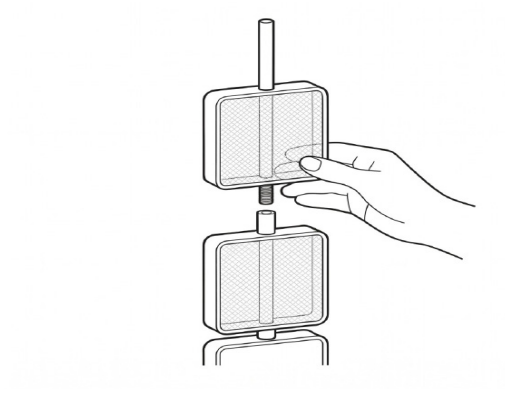

Position the base mounting plate, align it with the structural reference lines, and securely anchor it using appropriate heavy-duty fasteners suited to the substrate.

Rod and Fixing System Preparation

Thread the primary threaded rod or lower coupling sleeve securely into the anchored base plate.

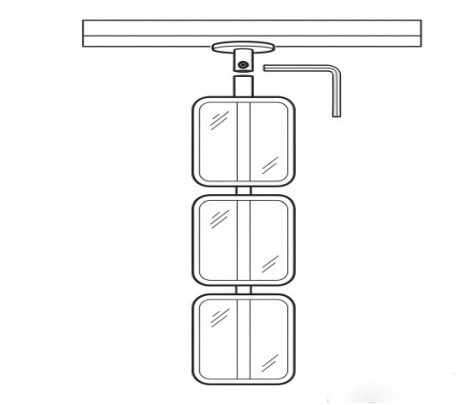

Ensure the connection is plumb and tightened to specification using standard technical assembly tools before loading components.

Positioning and Stacking the Product

Carefully lower the first textured glass block module over the threaded rod, letting it rest evenly on the base collar.

Screw on the intermediate brass connecting sleeve/rod segment to lock the glass panel in place, then repeat the sequence vertically to stack subsequent glass blocks and rods in alternating order.

Final Alignment and Inspection

Position the top anchoring cap fixture against the ceiling track or mounting plate and thread it down onto the final vertical rod segment.

Adjust tension evenly across the assembly to ensure vertical plumbness, structural rigidity, and clean alignment across all modular columns. Conduct a final visual and
